The following is an examiner's statement of reasons for allowance: Landry (WO 99/61209, figures 1, 2, 4) is the closest art of record and teaches a device for tightening a strap around freight comprising a reel 110 and a clamp 102 coupled to the body for holding a second end of the strap and comprising two clamp arms 158, 146. The differences are that the tightening device of Landry lacks both

“ii. a cam rotatably coupled to the clamp for securing the at least two clamp arms at a second end; and

iii. a locking arm coupled to the cam for attaching the cam to the clamp arm” (lines 11-14).

While Wall (US 301940, figures 1-4) teaches in figure 4 that it is known for clamping arms to be rotated and secured together by a cam, e, thereby acting as the only lock, it completely lacks a locking arm coupled to the cam for attaching the cam to the clamp arm. There is no suggestion to modify Landry so as to provide the device of Landry not just with an added cam for securing the two clamp arms, but also with an arm coupled to the cam for attaching the cam to the clamp arm that provides a locking function because Landry does not need the added security since it utilizes a cam structure, which fastens itself in place, as one of the clamp arms.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
